

7.8 BitTorrent

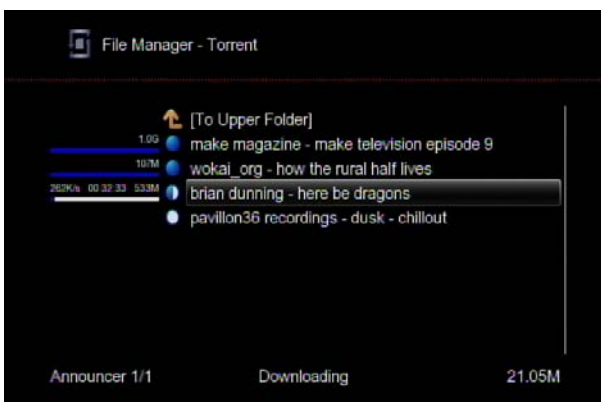

This player can work as BitTorrent client. You can download legal torrent files by searching on the Internet. There are websites that provide legally sharing torrents e.g. www.legaltorrents.com. The websites offer torrents as one method of downloading files.

- It is recommended to format hard disk by selecting HDD format > System from Setup menu. Otherwise, **BitTorrent client** may not work properly with this player.
- Back up your valuable data before formatting the hard disk
- 256MB Linux SWAP partition is created automatically if formatting is complete.
- Two folders called “Download” and “Torrent” are automatically created in the first partition of hard disk.

1. Browse the torrent files on the website and save the files (.torrent) to your PC
2. Connect the player to PC and copy the saved torrent files to “Torrent” folder of player

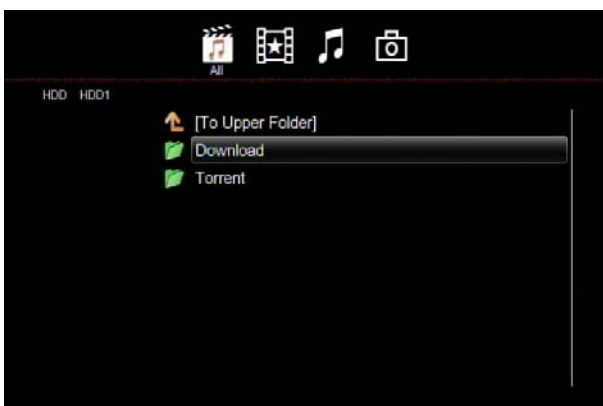

3. Press **HOME** and select **File Manger** icon.
Select **Torrent** and press **OK**

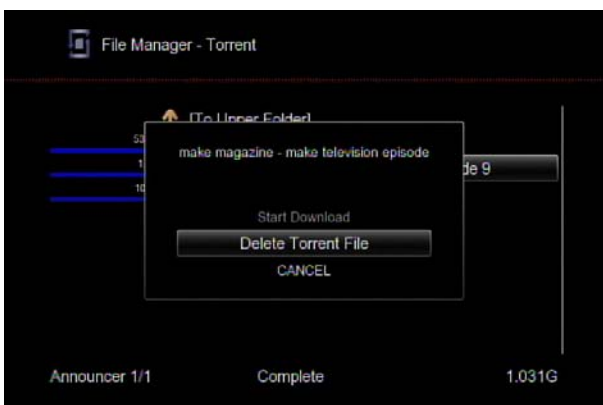

4. The picture is displayed like the left figure. Select a torrent file and then press **“Start Downloading”** to download the content.

5. The picture like left figure indicates that downloading of contents is finished.

6. Press **HOME** and then select **Browser** icon. Go to “Download” > “HDD1” and play the content of torrent file you downloaded.

7. Press **HOME** and select **File Manager** icon. Select **Torrent** and press **OK**.

8. Select the Torrent file you downloaded and press “**Delete Torrent file**” to delete the content.
